

Combating Terrorism and Transnational Crime Through the Enhanced Use of INTERPOL Data

PROJECT TERMINUS

Strengthening the ability of law enforcement and border security agencies to detect and interdict illicit international travel of Foreign Terrorist Fighters (FTF) and Transnational Criminals

The United States National Central Bureau's Project TERMINUS mission is to extend the INTERPOL's I-24/7 secure global police communications system in high-risk areas and select host nations globally.

By enhancing INTERPOL screening & record submission capabilities of INTERPOL member countries through purpose-built, custom software and provided computer equipment, Project Terminus enables partner nations to quickly implement solutions that directly impact domestic and global security.

Due to challenges with technology and expertise, many countries lack the tools to properly leverage INTERPOL data, including the INTERPOL Stolen and Lost Travel Document Database (SLTD), containing records for more than 100 million travel documents. By ensuring that law enforcement officers have access to INTERPOL's I-24/7 system, front-line authorities can search and cross-check traveler data in seconds and share sensitive or urgent police information with partners around the globe in real-time, 24 hours a day, 7 days a week.

PROJECT TERMINUS

Method of Implementation

Phase I

Method of Implementation

INTERPOL Washington consultants will conduct a technical needs assessment to help determine what adjustments and equipment are required to enhance SLTD contribution capabilities and integrate INTERPOL's I-24/7 system in their border and immigration screening systems.

Phase II

Installation

INTERPOL Washington will assist member countries with installation and integration of technical solutions to enable the automatic contribution of lost or stolen travel documentation into the SLTD database.

Phase III

Full Integration

INTERPOL Washington will help provide full integration of the I-24/7 tools and services into existing national immigration and border screening systems. I-24/7 training will be provided for the implementation of effective border security safeguards and management techniques.

Benefits of Implementation

AVAILABLE NOW

No need to wait for development.

OPEN BOX

All code available to download, modify, and compile.

FREE

Solutions provided to eligible partner nations at no cost.

FLEXIBLE

Many deployment and configuration options.

RELIABLE

Reliability is built in, automatically recovers, no data loss.

USER-FRIENDLY

A simple Windows Server installation; no dependencies on expensive Hardware.

PROVEN

Solutions have been proven and known to exceed expectations in member countries for nearly a decade.

SIMPLE

Simplifies the use of INTERPOL web services and access to INTERPOL databases.
